Meet Udeshi

Last updated: Nov. 2026

Ph.D. Candidate, NYU Tandon School of Engineering — Expected graduation: May 2027

m.udeshi@nyu.edu | https://mudeshi.in | github.com/udiboy1209 | Google Scholar | +1-607-216-5524

SUMMARY

Cybersecurity researcher and systems engineer who builds orchestrated, isolated sandbox environments for untrusted code execution, particularly for cyber-physical systems malware and AI-powered ransomware. Background in ML compiler engineering at Qualcomm, and hardware security at IIT Bombay.

EDUCATION

NYU Tandon School of Engineering
Ph.D., Electrical Engineering — Sep 2022–present
Control/Robotics Research Lab, Center for Cybersecurity. GPA: 3.958/4
Advisors: Prof. Farshad Khorrami and Prof. Ramesh Karri

Indian Institute of Technology Bombay (IIT Bombay)
B.Tech. and M.Tech. (Dual Degree), Electrical Engineering — July 2014–June 2019
Computer Architecture and Dependable Systems Lab. CGPA: 8.18/10
Thesis Advisor: Prof. Virendra Singh

WORK EXPERIENCE

Siemens Healthineers USA, Princeton, NJ — May 2026–Aug 2026
AI Cyber Intern, AI Factory

- Contributed to ARPA-H UPGRADE to make vulnerability patching more efficient for clinical and hospital setups, and modeled the cyber-clinical impact of unpatched vulnerabilities in that critical infrastructure.
- Contributed to LLM-based generation of synthetic vulnerabilities for hospital devices and networks, as training data for an RL vulnerability-patching agent.
- Ran multi-GPU vLLM inference on single nodes, and multi-node, multi-CPU hospital simulations as dependency-linked Slurm jobs.

Qualcomm R&D, Bangalore, India — July 2019–July 2022
Senior Engineer, ML Compiler Team for Cloud AI100 Accelerator

- Built multi-core, multi-thread data tiling, memory management, graph scheduling and operator fusion in the Cloud AI100 compiler.
- Implemented accelerator kernels for the input and output processing stages inside ResNet and YOLO graphs. Worked deep in PyTorch and TensorFlow graph-capture and op-lowering internals; contributed to the open-source *PyTorch Glow* compiler.
- Explored polyhedral loop and array optimization alongside Halide-style scheduling. Developed graph optimizations for 2D/3D vision, recommender and autonomous-driving models, and deployed a power-efficient KCF object-tracking pipeline on AI100.

Amazon India — Jul 2017–Aug 2017
Software Development Intern, Transportation Financial Systems
Automated setup of 30+ AWS resources with CloudFormation. Implemented processing and sorting of 1 million+ receipts daily using DynamoDB and SQS.

Google Summer of Code, Kivy — May 2016–Aug 2016
Python Native UI Framework Game Engine
Built a Python/Cython Tiled maps module and a Cython-optimized entity-component animation system for the KivEnt game engine.

RESEARCH PROJECTS

Sandboxing and Isolation — Sep 2025–present
Ph.D. research, Control/Robotics Research Lab, NYU

- Built SaMOSA, an orchestrated QEMU sandbox for dynamic malware analysis that runs ARM64, x86-64 and PPC64 guests with OpenPLC over Modbus TCP, and records hardware performance counters, disk, network and syscall activity (IEEE ESL / EMSOFT 2026).
- Extended the sandbox into a power grid digital twin for realistic, system-aware evaluation of untrusted code without risk to physical hardware (IOLTS 2026).

- Prototyped *Ransomware 3.0/PromptLock* to evaluate LLM-powered ransomware lifecycles with Lua code generation and stage-wise attack chain execution. Covered by NYU Tandon News (2025) and MIT Technology Review (2026).

Tamper-Proof Measurements Outside the Host
Ph.D. research, Control/Robotics Research Lab (IEEE TNSM 2025)
Designed tamper-proof traffic measurement for intrusion detection on a Netronome SmartNIC (P4, embedded C), out of reach of host-OS rootkits. Two designs (associative table, count-min sketch) run at 10 Gbps with 99.5% of baseline throughput and 12–23 µs added latency.

LLM Agents for Cybersecurity Mar 2024–present
Ph.D. research, Center for Cybersecurity, NYU

- Curated NYU CTF Bench (200 challenges, NeurIPS 2024) with Docker-hosted challenges and evaluations, evaluating five state-of-the-art LLMs, and co-authored an LLM-as-a-judge scoring system (AAAI 2026). Developed EnIGMA (ICML 2025), whose Interactive Agent Tools give LLM agents security tooling, with state-of-the-art results on 350+ challenges.
- Developed D-CIPHER, a multi-agent framework of collaborating planner and executor agents, with state-of-the-art solve rates of 22% on NYU CTF Bench and 20% on Cybench.
- Organized the CSAW LLM Attack Challenge (2024–2026), judging the agentic solutions and agent frameworks submitted by 64 teams over three years.

Reverse Engineering and Supply Chain Security Aug 2022–present
Ph.D. research, Control/Robotics Research Lab, NYU

- Designed REMaQE (`angr` symbolic execution with `capstone` disassembly, 100% accuracy on C and Simulink binaries, ACM TCPS) and REMEND (Transformer neural decompilation, ACM TIST) to recover math equations from CPS binaries.
- Trained the REMEND Fairseq Transformers (up to 12M parameters) on the NYU HPC. One model covers three ISAs, three optimization levels and two languages, with 89.8–92.4% accuracy on C and Fortran, 8% above state-of-the-art on real-world code, and 0.13 s per function.
- Designed an LLM binary-diffing framework for software supply chain security that detects malicious code in software updates, with LLM inference and batch completion via vLLM on parallel HPC jobs.
- REMaQE found a bug in the Linux `tmon` PID controller; submitted a kernel patch (2023).

Hardware Security (Masters Thesis) Aug 2018–June 2019
CADSL, IIT Bombay. Advisor: Prof. Virendra Singh
Designed cache side-channel attacks that disable the hardware prefetcher to strip its noise (against ciphers) and that leak between SMT threads through the shared re-order buffer (via IPC).

SKILLS

Systems	Virtualization, Docker, Linux, Slurm/HPC (multi-node jobs)
Programming	C/C++, Embedded C, Python, Shell/Bash, Assembly, JavaScript, HTML, Java
Security	Symbolic execution (`angr`), static/dynamic binary analysis (Binary Ninja, Ghidra, `radare2`), neural decompilation (Fairseq), binary diffing (`ghidriff`), malware sandboxing (QEMU), side-channel analysis (gem5, PIN)
ML	PyTorch, TensorFlow, Fairseq, vLLM, ReAct LLM agents
Coursework	Hardware Security & Trust, Deep Learning, Advanced Computer Architecture, Advanced Hardware Design, Computer Vision, VLSI Design

HONORS AND AWARDS

Student Travel Grant to present at ESWEEK (EMSOFT) — IEEE CEDA, 2026

DAC Young Fellowship — Design Automation Conference, 2023

RoCStar (Recognition of Outstanding Contributions), AI100 compiler and KCF — Qualcomm, 2021

Gold Medal, Indian National Physics Olympiad (top 35 nationwide) — HBCSE, 2014

SERVICE AND PEER REVIEW

Peer Review: AAAI 2026, AAAI 2027, ICLR 2026, ICML 2026, NeurIPS 2026, CPS-IoTSec 2025, *ACM Transactions on Intelligent Systems and Technology*, *The Computer Journal*, *The Journal of Supercomputing*, *Journal of Computer Virology and Hacking Techniques*.

2016–2017	Manager, Electronics Club	IIT Bombay
2015	Reviewer, 46th International Physics Olympiad	Mumbai, India
2014	Volunteer tutor, Supplemental Learning Program	Vidya NGO Mumbai

TEACHING AND MENTORING

2020–2021	Mentor, hardware security project, Qualcomm Innovation Fellowship.	Qualcomm
Spring 2019	Teaching Assistant, VLSI Design Lab (Prof. Sachin Patkar).	IIT Bombay
Fall 2018	Teaching Assistant, Microprocessors (Prof. Virendra Singh).	IIT Bombay
Summer 2016	Teaching Assistant, CS101 Computer Programming (Prof. D. B. Phatak).	IIT Bombay
